## Cornerstone laying for new HUBER office and production building in China

18.10.2018

Today, on October 18th 2018, exactly at 10:18 local time, the official groundbreaking took place for the erection of the new company building for HUBER China in the Shaxi District of Taicang (Jiangsu province).

The cornerstone laying ceremony took place in the presence of the official representatives of the local government / administration and the team of HUBER China represented by managing director Franck Loctin.

The Shaxi District is located in the northwest of Shanghai on the Changjiang river (also called "blue river"). The construction works for the 13,000 m<sup>2</sup> new office and production area, 1,800 m<sup>2</sup> of which are office buildings, will go on there until autumn 2019.

The new production facility will have five times the capacity of the previous production in China. The medium-term goal is to manufacture there machines at the value of at least 30 - 40 million Euros and sell them exclusively to the important Chinese market.

Owing to the further increase in competitiveness and capacity, all will profit from this ambitious plan and the innovative solutions and products: HUBER SE as parent company, our subsidiary in China and, not least, China's environment!
