## Now online: New website of sludge2energy GmbH

02.11.2021

New website presence for sludge2energy GmbH: The new S2E website has been online since Wednesday, 27 October.

After intensive conceptual, design and content work, the project team has replaced the site with a new and contemporary appearance. The team placed great emphasis on a modern and appealing design that meets the highest standards on desktops and mobile devices. The content has also been significantly expanded and now offers a lot of additional information on the topic of sewage sludge and concrete projects for sustainable utilisation.

HUBER is the founder and partner of sludge2energy GmbH, together with WTE Wassertechnik GmbH. The technical services offered by sludge2energy GmbH include projects for thermal sewage sludge utilisation. The energy self-sufficient sludge2energy process is based on the combination of a sludge dryer and subsequent incineration in a fluidised bed furnace with state-of-the-art flue gas cleaning. This makes an important contribution to waste disposal safety.
